

Serenova Customer Support Services

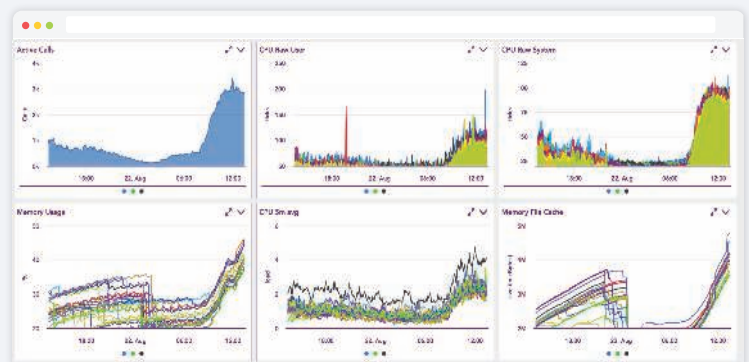

Business critical support offerings and a global network of experts. Designed to reduce TCO, improve response times, and deliver better experiences for our customers - and yours.

Our simple and effective support plans ensure you don't just succeed in the cloud, you thrive.

Support Plans Aligned to Your Business Objectives

Standard support is available for all Serenova customers. Those needing accelerated support response and anywhere anytime access can take advantage of our Premium support plan. For customers needing technical consulting and more personalized support, the Premium Plus Plan includes a Technical Account Manager.

Standard	Premium	Premium Plus
All the essentials including access to our online support portal to create and track cases, as well as a toll free support line for priority 1 escalations.	Enhanced response times, live chat, and 24/7 phone support regardless of the priority level.	All the benefits of Premium support, plus the personalized support and expertise of a technical account manager (TAM).

Pricing	Included	10%	See Premium Plus Tiers

Support Community

Submit, expedite, and manage cases within a secure online community.

Knowledge Base

Find solutions to problems faster through a searchable archive of knowledge articles and best practices accessible from any device.

Premium Support Plus

Premium Support Plus is available as an extension to the Premium Support plan, providing you with an experienced Technical Account Manager (TAM) who is knowledgeable about your environment and internal procedures.

Serenova Technical Account Managers go far beyond the realm of basic case management and ticket escalation. They serve as technical consultants focused on maximizing the business value and successful operations of your Serenova environment.

TAMs provide proactive and strategic support, operational management, and partnership activities. They serve as your direct link into product management, engineering, and technical support to help prioritize product feature requests, enhancements, and expedite the resolution of support tickets. They offer a wealth of product and subject matter expertise and can provide ongoing configuration support for minor adds and changes – reducing both the workload for your staff and the need for professional service engagements for light-duty configuration work.

TAM Program Benefits at a Glance

Personalized Run Book

Improve speed of support and resolution through a well-defined and repeatable framework aligned to your business processes.

Product Release and Maintenance Management

Review upcoming platform maintenance, patches, and product release timing – including the corresponding impact and/or benefit to your business.

Service Reviews

Operational review of all outstanding cases to ensure follow up and closure - highlighting key service metrics and scorecard results, as well as consulting on upcoming releases that have potential for impact.

Escalation Management

Proactive case monitoring where critical cases are prioritized with internal support and operations to expedite issue resolution.

Platform Configuration Support

Configuration requests may include flow design and optimization, tenant configuration, user profiles, skills-based routing, custom reports, and dashboard configuration.

Best Practice Webinars

Best practices related to call flow architecture, tenant administration, knowledge management, and critical support process flows.

Platform Enhancement Coordination

Prioritize platform enhancement requests with internal Product and Engineering teams.
